

Agil-IT

The solution for remotely recording and tracking care data directly from patient home.

Agil-IT

Agil-IT is an innovative solution for the secure collection and transmission of care and health data from a patient's home.

Agil-IT makes it possible to remotely record care data and/or physiological parameters and thus increase the efficiency of at-home care.

Agil-IT also integrates a secure video conferencing feature to enable remote consultation by the physician from the patient's home.

The solution is a comprehensive solution that integrates:

- ▶ A tablet-based interface for gathering information and transmitting it in a secure way via a mobile data subscription.
- ▶ A scanner for the transmission of prescriptions directly to our clients' information system.
- ▶ An ID card reader for reliable authentication of the health professional connecting to the information system in order to input care data.
- ▶ Our connected medical sensors (blood pressure monitor, pulse oximeter, actimetry sensor). The solution can be adapted to integrate any other equipment.
- ▶ An application server for data hosting.

Benefits of the Agil-IT solution

► Interoperability

Agil-IT is an interoperable solution that is easily integrated into the customer's existing information system.

► Ease of use

A user-friendly interface allows users to easily take advantage of a product that integrates complex and powerful solutions (medical sensors, video calling).

► Scalability

Agil-IT's software architecture is optimized to facilitate the evolution and the addition of new functionalities in order to best meet the current and future needs of our customers.

► Security

The data collected is transmitted in compliance with the relevant health and privacy standards and regulations. This security is ensured from start to finish, in other words, from the patient's home right up to the server receiving the data.

► Remote monitoring

Updates and monitoring of the solution are managed remotely via a secure connection.

Users

Agil-IT is a solution designed for :

- Home care and nursing organizations and providers, nursing homes
- Healthcare institutions
- Health insurance companies et mutuelles that wish to develop a service for the tracking of physiological parameters and / or care provided to their patients as well as teleconsultations.

Contact us

Our company specializes in the development and marketing of connected medical devices. In addition to these all-inclusive solutions, we also assist our clients in establishing their personal remote monitoring and data transmission projects.
